

ABSTRACT

Syifa Maulida (11160716), Designing an Accounting Information System for Cash Flows in MTs. Al-Fatah Pabuaran.

Use of computerized system in this era is really necessary on helping human work. One of them can help in cash flow management and minimize the mistakes made. In addition, it can also reduce the loss of data that has been stored. The existing problems in MTs. Al-Fatah Pabuaran is that they still use cash flow recording system manually such as using paper media (books). Accounting information system has a function to provide financial flows information for users throughout the company. Due to the existence of information needs increasingly, hence a good system is needed to facilitate all processes. The design of the cash flow accounting information system is a solution to solve that problems which exist in schools, also the availability of a computerized system can reach an effective activity on supporting financial activities at school.
